Enterprise Keyboard 3.9.9.1
Release Notes – October, 2020

Highlights

- Added support for WT6300 devices running Android 10
- Caps-lock function conforms with Android conventions

Device Support

Newly supported devices in this release: WT6300

Device support dropped with this release:

- WT6000 running Android 7.x Nougat

See all supported devices

New in Enterprise Keyboard 3.9.9.1

Caps Lock Function

The shift key now behaves according to Android conventions: single-tapping the shift key outputs the next letter as upper-case and subsequent letters as lower case; double-tapping activates "caps lock," and all characters that follow are output in upper-case. Single-tapping a caps-locked shift key releases the lock.

Issues Fixed in this Release

• [SPR- 40786] Enterprise Keyboard no longer occupies screen space when disabled.

Known Issues – none

About Enterprise Keyboard

Enterprise Keyboard is a soft input device designed to provide the most productive means possible of inputting data into Zebra devices. Building on the stock Android keyboard, Enterprise Keyboard provides programmable keys, can switch quickly between fixed and custom layouts, and has the ability to scan barcode data directly into an application using any of the device's scanners.
