- **Keyguard camera and keyguard search** features are terminated

Device Support

- **Newly added device support in this release:** None

See **all supported devices**

New in Enterprise Home Screen 6.1

Privileged settings for admin

Enterprise Home Screen 6.1 now allows administrators to access Privileged Settings on WS50 devices, which enables the System Settings panel, USB debugging and Google Quick Search functions while the admin is logged in. Visit **TechDocs** for details.

Keyguard Camera and Keyguard Search

Keyguard camera and keyguard search features are terminated beginning with EHS 6.1. Camera and search applications were removed from the Keyguard in the Zebra OS beginning with Android 11.

Resolved Issues

- SPR: 52446 – The camera app will now not disappear from the user screen on suspend and resume the device.

Usage Notes

- None

Known Issues

- None

About Enterprise Home Screen

Enterprise Home Screen for Android provides a simple way for administrators to control access to apps and settings on a Zebra device without the need to write custom code. Using a simple touch interface, EHS easily limits usage to one or more specified applications, prevents changes to device settings and locks down the file system. It can be configured in seconds, and settings can be deployed via MDM. EHS settings are stored in a simple XML file that's easy to read and edit by hand, if necessary.
