

Z-Band Wristbands

Zebra's Z-Band wristbands are one of the most durable wristbands

A barcode that fails to scan or requires repeated attempts to scan jeopardizes patient safety and staff productivity. Zebra's supplies research and development team has worked with our coatings suppliers to develop a wristband that stands up to not only moisture, but a wide array of hand sanitizers to ensure optimum image durability and scanning performance.

For more details on the durability testing performed, please download our white paper on www.zebra.com titled "Laboratory Testing of Zebra's Z-Band Direct Thermal Antimicrobial Wristbands."

Zebra's Z-Band® direct thermal wristbands:

- Features a silver antimicrobial coating that protects the wristband from degradation
- Enable staff to quickly and easily print and securely fasten in less than a minute using an adhesive tab or color clip
- MR Safe* level of safety
- Latex-free

*Z-Band wristbands are made of polypropylene and vinyl. The direct thermal imaging chemistry is composed primarily of leuco dyes and developers. The inks / varnishes used are UV varnishes and water-based inks. There is no metal content in or on these particular patient identification bands. Therefore, Z-Band wristbands are considered to be MR-Safe.

Zebra Z-Band wristbands are available with adhesive or clip closure, in a variety of sizes and colors to meet your organization’s needs.
