

Increase Efficiency Now and Into the Future

New RFD40 UHF RFID Sleds help increase associate performance and provide the flexibility and adaptability to keep up with changing technologies.

The Challenge: Keeping up with changing technology and the constant flow of inventory.

In retail, staying on top of inventory flow is critical to the success of your business. Managers are constantly challenged to improve worker efficiency and free their associates to do their jobs better. You need a way to track inventory faster and easier. But you also need to know that the RFID technology you invest in is going to last. Because if you change up the mobile computers you use, you don't want to have to completely update your readers, too. That would be costly, not to mention time-consuming, taking away from your ROI.

You need simple, effective, future-proof devices that are easy to manage, deploy and update.

The Solution: Reliable technology from Zebra designed to last even as new mobile computers come out.

By getting a device that outperforms anything on the market and adapts to outlast your expectations, your business will thrive. Whether you're running a small, local operation or managing a massive multi-national box store, you can control your inventory tracking like never before with RFD40 Sleds.

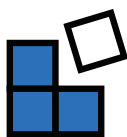

Superior Performance

1,300+ tag reads per second, 20+ foot range, tool-free changeable sled adaptors and cradle cups, quick-change batteries, and impressively durable drop specs—in the world of work, these devices get the job done.

Upgrade and Save

Increase your ROI with these adaptable, upgradeable RFID devices. Because they're compatible with current Zebra mobile computers and able to upgrade, they will be effective tools in your arsenal for years to come.

Fundamentally More Functional

The new tri-function trigger allows associates to quickly access often-used features, such as RFID reading, barcode scanning and other actions critical to getting the job done quickly and easily. The programmable third trigger function provides yet another quick way to access features, such as the enter key or push-to-talk to open the lines of communication.

Adaptability and Flexibility To Optimize Your Capabilities

Keeping devices up to date can absorb a lot of time and resources. You need something simpler and more reliable that you don't have to replace every year. Something that's easy to maintain and compatible with whatever devices you're using now and whatever you're going to upgrade to down the line.

Designed With Retail in Mind

Whether you use your devices for cycle counting, item finding, BOPIS, BOPAC, couponing and loyalty programs, returns management, or direct store delivery, one thing is for certain – you need to stay on top of inventory. RFD40 Sleds work faster and more efficiently than anything on the market. But more importantly, it's compatible with the devices you're already using and future-proof for the devices you might upgrade to in the future.

Solidify Your ROI

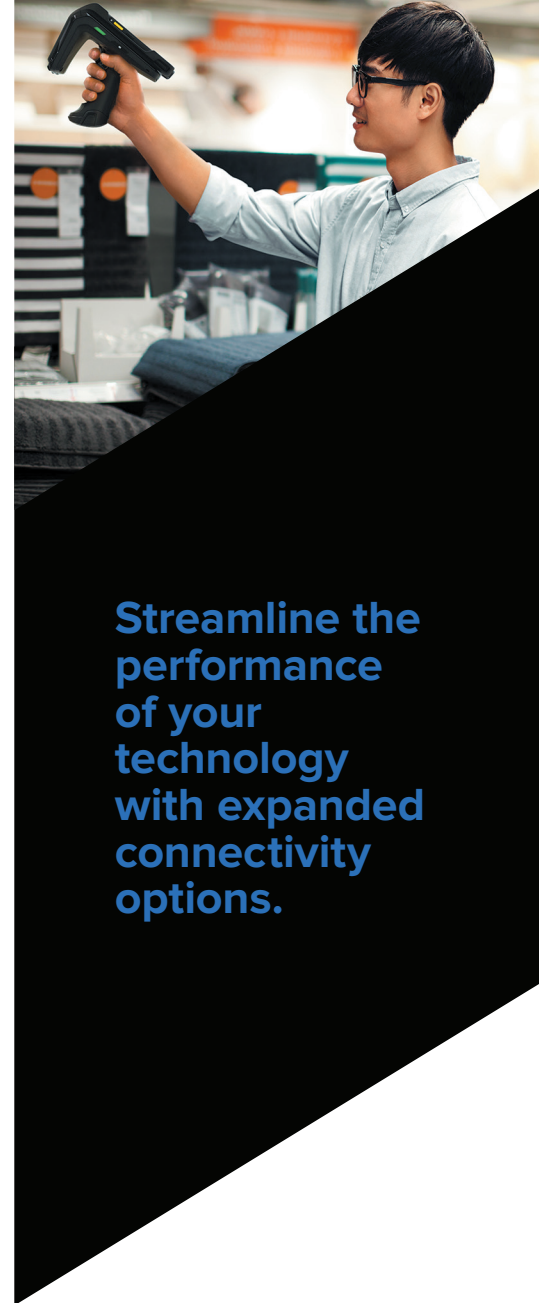

Upgrade from one generation to the next and adapt to new technologies as they change. RFD40 Sleds can help you improve ROI and insulate your bottom line.

Quick Change for the Long Haul

RFD40 Sleds utilize batteries that can be changed quickly and easily. Associates can swap out batteries on the fly without the need to take apart the device, unscrew or undo latches on the battery compartment. That means they spend less time maintaining the sled and more time getting tasks done.

Premium Features for Forward Thinkers

The new RFD40 Premium and Premium Plus Sleds feature integrated Wi-Fi 6 for over-the-air (OTA) device management,* while eConnex™, Bluetooth® 5.3 and NFC tap-to-pair connect easily to current and future Zebra mobile computers and smartphones. The RFD40 Premium Plus Sled also includes a built-in imager for 1D and 2D scanning.

Streamline the performance of your technology with expanded connectivity options.
