

# 5 Ways Device Sharing Empowers Your Front-Line Workforce

When front-line workers don't have profile management and device sharing capabilities, they can't switch roles on the fly without the time-consuming task of switching devices. With a powerful profile management solution, enhance the flexibility and security of your workforce, making it easy to adapt to changing circumstances on the front line.

Here are 5 ways that using profile management to share devices empowers your workforce:

## 1 Maximum Flexibility for Work and Role Selection

- Devices are preconfigured and set up in the cloud with user profiles and all workers need to start their workday
- Data is automatically pushed from the cloud to the device
- User provisioning and authentication is secure and simple

## 2 Seamless Integration into Your Existing System

- Interface with your Access Management System
- Authenticate user profiles
- Authorize access to other applications in the same solution set

## 3 Simplified Role Management

- Create an easier setup process for new device users
- Reduce disruption in the user experience when employees change roles or leave the company
- Ensure secure data exchange between existing systems and the profile management application

## 4 Lower Costs

- Reduce duty cycle and the overall cost of device ownership by sharing devices across multiple employees
- Support a bring-your-own device strategy, with fewer company-owned devices and lower upkeep costs

## 5 Elevated Service

- Give them the flexibility to change their "role" as needed
- Improve their general experience and efficiency at work
- Enable them to sign in and out of profiles tailored to their specific roles and work

 Empower device sharing and connect your workforce via Zebra Workcloud Communication Profile Manager.
